Professional Services – Due Diligence NW 800 Block  
CRA No. 2023-05**

Dear Mr. Ivan Cabrera:

Peacock Architects is pleased to submit this Letter of Agreement for professional architectural services on the above referenced project as described under Basic Services below.

### **BASIC SERVICES:**

Disciplines include Professional services in this proposal are for architectural only to provide the supporting code research and feasibility study on the above referenced properties to understand the best and highest use of the land for future development.

### **Summary Work**

Peacock Architects will provide a due diligence package which includes a summary of the code research and a high-level evaluation of the feasibility of developing the above-referenced sites. This preliminary review will evaluate two potential development scenarios: (1) a mixed-use development, including residential uses in conjunction with permitted complementary commercial uses as anticipated by the zoning for this area, and (2) a 100% commercial development scenario. The analysis will consider the potential residential housing yield associated with the mixed-use option, including any bonus units that may be permitted under the Live Local Act.

The due diligence package will also include conceptual site diagrams depicting property boundaries, required setbacks, and preliminary building footprints to understand the general relationship between the site and potential development. As part of this effort, Peacock Architects will prepare conceptual massing studies for each development scenario to illustrate the potential scale and form of the development under both the mixed-use and 100% commercial analyses. The planning approach will consider the character of the surrounding neighborhood, with particular sensitivity to adjacent single-family homes, and will explore strategies such as building step-backs, increased setbacks, and massing transitions to create a compatible interface with the surrounding residential context. A conceptual 3D massing study will be developed to evaluate the overall scale, form, and height of the proposed building and its relationship to the adjacent properties.

This effort is intended to provide a very high-level planning assessment of the site and is not intended to represent a final design or full site planning analysis. The information will be supplied to the City of Delray Beach Community Redevelopment Agency to assist in evaluating the general development feasibility for the site under the different development scenarios described above.

**TASKS:**

**Due Diligence Package**

Peacock Architects will prepare a due diligence package that provides a high-level evaluation of the feasibility of developing the project site. This preliminary assessment will include a review of the site’s location, size, and applicable regulatory and zoning constraints. The analysis will evaluate two potential development scenarios: (1) a mixed-use development including residential uses in conjunction with permitted complementary commercial uses as anticipated by the zoning for this area, and (2) a 100% commercial development scenario. The mixed-use analysis will also consider the potential residential housing yield, including any bonus units that may be permitted under the Live Local Act.

As part of this effort, Peacock Architects will prepare conceptual site diagrams and preliminary planning diagrams illustrating property boundaries, required setbacks, and preliminary building footprints to understand the relationship between the site and the potential development. Conceptual massing studies will also be prepared for each development scenario to evaluate the potential scale and form of development and its relationship to adjacent properties.

The planning approach will consider the character of the surrounding neighborhood, with particular sensitivity to the adjacent single-family residential areas, and will explore strategies such as building step-backs, increased setbacks, and massing transitions to create a compatible interface with neighboring homes. A conceptual 3D massing study will be developed to evaluate the overall scale, form, and height of the proposed building and its relationship to the adjacent properties.

A summary of the findings, including the high-level code review, site considerations, and preliminary planning concepts, will be compiled into a due diligence package that outlines key observations, potential friction points for development, and overall considerations related to the feasibility of developing the site under the different development scenarios.
