REV. #2
PER TAC COMMENTS
02/05/19

I. O GENERAL

1.1 DESCRIPTION OF WORK:

- A. Extent of landscape development work is shown on the Drawings and in the related Schedules.
- B. The work consists of furnishing all plants, materials, equipment, necessary specialties and labor required for the installation of plant and other materials as shown on the Drawings and/or in the Specifications.
- C. Excavation, filling and grading required to establish elevations shown on the Drawings are not specified in this Section. Refer to earthwork Section.
- 1.2 REFERENCE PUBLICATIONS:

- The following standards form a part of the Specifications:
- A. Florida Department of Agriculture "Grades and Standards for Nursery Plants", most recent edition.
- B. American Joint Committee on Horticultural Nomenclature "Standardized Plant Names Dictionary"
- C. The American Standard for Nursery Stock" (2004 edition).
- D. American National Standards Institute (ANSI)
- ANSI A300 and ANSI Z60.1-most recent edition.
- E. Florida Friendly Best Management Practices for Protection of Water Resources by Green Industries, Florida Dept of Environmental Protection, Rev Dec 2008
- F. IFAS -Institute of Food and Agricultural Sciences, University of Florida.

1.3 INSTALLER - CONTRACTOR QUALIFICATIONS:

- A. The "Contractor" shall be State licensed and regularly engaged in the installation of living plant material. Labor crews shall be controlled and directed by a landscape foreman professionally trained and well versed in landscape installation, plant materials, reading blueprints and coordination between the job and nursery and shall be able to communicate with the Owner and the Landscape Architect.
- B. The Contractor shall be licensed and shall carry any necessary insurance and shall protect the Landscape Architect and Owner against all liabilities, claims or demands for injuries or damage to any person or property growing out of the performance of the work under this contract. All workers shall be covered by Workmen's Compensation Insurance.

1.4 SUBMITTALS: Refer to schedule of submittals.

1.5 COORDINATION:

- A. Coordinate and cooperate with other trades and contractors to enable the work to proceed as rapidly and efficiently as possible.
- B. Irrigation work shall normally precede plant installation Install trees, large B&B material, shrubs and ground cover plants before lawns are installed.
- C. Commencement of Work; Landscape Contractor shall notify Landscape Architect at least 7 days in advance of scheduled commencement of work. Landscape Contractor shall review plans and/or field layouts with Landscape Architect at least 2 days prior to installation or on the site as needed

1.6 INSPECTION OF SITE: Prior to the award of the contract, the Contractor shall acquaint himself with all site conditions. Show utilities or other improvements not shown on the Drawings before starting excavation. The Contractor shall promptly notify the Landscape Architect or Owner for instructions as to further action. Failure to do so will make Contractor liable for any and all damage arising from his operations subsequent to discovery of such utilities not shown on Drawings.

1.7 PROTECTION OF EXISTING PLANTS AND SITE CONDITIONS:

- A. The Contractor shall provide, install and maintain the necessary precautions to protect all persons and property, including the general public from harm or injury due to the work.
- B. The Contractor shall take precautions to protect existing site conditions. Should damage be incurred, the Contractor shall repair the damage to return the object or area to its original condition or to no additional charge.
- C. Utility Locates - Regardless of utilities that may or may not be shown on the drawings, the Contractor shall be responsible to have utilities located in the area of work before the work commences. The Contractor shall also verify and comply with any requirements or clearances to plant materials that may be required of any Utility Company.

1.8 CHANGES IN THE WORK: The Owner reserves the right to substitute, add or delete any material or work as the work progresses. Adjustment to the Contract Sum shall be approved by the Owner by a written Change Order, prior to execution. The Owner shall be given (2) week notice for the opportunity to review and approve all plant materials delivered to the job site prior to installation.When unit prices have been established, they shall prevail for all Contract Additions. For Contract Reductions, the Owner shall receive full credit, based on unit pricing, if changes are implemented prior to delivery of plant materials. If Owner changes are made prior to installation, Owner shall receive a credit for labor to install plants, less costs associated with purchase and delivery. The Landscape Architect assumes no financial or material responsibility for any changes made by, or on behalf of the the Owner.

1.9 OWNERS OBSERVATION:

- A. The Landscape Architect or Owner assumes no responsibility for the Contractor's means and methods in the execution of this contract beyond the observation to ensure, to the Owners satisfaction, that the Drawings and Specifications and the Contractor's work are being properly interpreted. This observation and checking will not relieve the Contractor of any responsibility for the performance of his work in accordance with the Drawings and the Specifications (including proper planting practices or other material or performance deficiencies).
- B. The Landscape Architect and Owner reserve the right to reject any portion of the work, material or workmanship which does not conform to the Contract Documents and Standard set forth herein. Rejected work shall be removed and/or corrected by the Contractor, at his own expense, at the earliest possible time and prior to final payment.

1.10 PROJECT CONDITIONS:

- A. Familiarization with Overall Project Requirements: The Contractor shall review and become familiar with the Design and Overall intent of the proposed Work related to the Work. This includes, but is not limited to: Civil engineering and Drainage Plans, Architectural layouts, project area access, contractor equipment access, existing and proposed utility locations, Irrigation Plans, Outdoor Lighting Plans, Paving Plans, Project Sequence and Timing plans, Town/HOA neighborhood requirements, etc.
- B. Obstructions: The Contractor shall exercise care in digging and other work so as not to damage existing work, including underground pipes, sprinklers, control cables and hydrants of watering systems. Should such overhead or underground obstruction be encountered which interferes with planting, the Landscape Architect shall be consulted for consideration for alternate locations of plants to clear such obstructions. The Contractor shall be responsible for immediate repair of any damage caused by his work.
- C. After notice to proceed, the Contractor shall complete landscape work in a timely manner, as portions of site become available. Actual planting shall be performed only when weather and soil conditions are suitable in accordance with locally accepted practice.
- D. Contractor shall coordinate landscape and planting work with other trades, such as, the irrigation (sprinkler) installer, electrician, lighting installer, paving installer, and sod installer; Landscape installer shall coordinate to ensure that no plantings will interfere with the proper functioning of the sprinkler system. The Contractor shall point out to the Irrigation installer situations where minor adjustment or relocation or addition of sprinkler heads may be required for the proper placement of the watering system. The Contractor shall coordinate the planting of specimen plant materials, trees, palms and large shrubs shall prevail over irrigation head placement.

1.11 ACCEPTANCE:

- A. At the discretion of the Owner, early acceptance of the work may be obtained for progress payment of approved phases; or when the time between commencement of the work and substantial completion exceeds 90 days (at no fault of the contractor). Early acceptance shall be contingent upon a satisfactory inspection of the completed landscape work by the Landscape Architect and/or the Owner.
- B. Substantial Completion of the Work is the point in construction when the Work is sufficiently complete, in accordance with the Contract Documents, all related cleanup has been performed; and the Landscape Architect's provide an opinion that the Owner can utilize the work as intended.
- C. Final Completion is the completion of all work included in the Contract Documents except the Contractors responsibility to correct the work to the satisfaction of the Owner and the Landscape Architect. The Warranty Period and Maintenance period shall commence upon Final Acceptance.

1.12 WARRANTY PERIOD AND CORRECTION OF THE WORK:

A. For a period of twelve months from the date of acceptance, all new plant materials except grass shall be alive and healthy, upright and vigorous growth for each specific kind of plant. There shall be no signs of nutrient deficiency, disease or insect infestations.

B. Plants which are rejected shall be replaced or corrected within two weeks of rejection. Replacement material shall be the same species, size and quality as called for in the Contract. A new correction of the work period of twelve (12) months shall begin upon replacement and acceptance by the Landscape Architect of all replacement plants, this includes plants which are discovered at any time to have been planted at an improper depth.

C. The installer shall repair damage to other plants or lawns that occurs during the plant replacement process at no cost to the Owner.

D. Plants which have not been approved and subsequently die or are damaged by washout, wind storm, traffic, vandalism, or demonstrable failure of the Owner to maintain after Substantial Completion of the Work is not covered in this correction of the work provision

2.0 PRODUCTS

2.1 MATERIALS LIST:

- A. Plant species and size shall conform with the Plant List and information noted on the Drawings.
- B. The quantities given in the Plant List are intended for the convenience and as a guide for the bidder and does not relieve the bidder of his responsibility to do a comprehensive plant take off from the Drawings. Information on the drawings control.
- 2.2 PLANT MATERIALS:
- A. All plant material shall be nursery grown unless otherwise noted. Plants shall be graded Florida No. 1 or better and shall be sized as outlined under Grades & Standards for Nursery Plants, State Plant Board of Florida. Coconut Palms shall be grown from certified seed.
- B. Collected material when specified or approved shall be of good health, free from disease, insect or weed infestation. Testing may be required at the discretion of the Landscape Architect and/or the Owner and shall be provided at no additional cost.
- C. Plants materials must equal or exceed the measurements specified in the plant list, which are the minimum acceptable sizes. Those plants specified as specimens are to be approved by the Landscape Architect before being brought to the site. Unless otherwise noted on the drawings, these plants shall be Florida Fancy.
- D. Height of plant materials shall be measured from the top of the ball to the top of the pit, with branches (or branches) in normal position. Their width shall be measured across the normal spread of the branches (or fronds). In cluster type palms the main trunk shall meet the height requirement and all other trunks shall be 3/4" or more of the required height unless otherwise noted on the drawings. Where symmetry is required, match plants used as nearly as possible to the satisfaction of the Landscape Architect.
- E. Plants that meet the height requirements, specified, but do not have the normal balance of height and spread typical for the respective plant, shall not be accepted.
- F. Abbreviations on the Drawings are as follows:
- B&B - field grown plant "balled and burlapped".
- Cal - caliper/diameter measured 6" (152.4 mm) above soil line. For trunks larger than 4" (88.4 mm) caliper diameter, the caliper measurement shall be determined at 12" above soil line.
- CT - clear trunk measurement from top of ball to first branching.
- CW - clear wood, in palms the distance from soil line to lowest living from leaf base.
- DBH - caliper or diameter measured 4 feet (1.22 meters) above soil line
- GW - Greywood, in palms, mature trunk from ground to base of the green crown shaft.
- OA - overall height from top of ball to top of current season's growth or last open frond in normal position in palms.
- Spd - spread or average distance across the average diameter of plant branching structure.

- R - Root bagging and Containers: Plant materials in containers shall have a well established root system and shall not be root bound. All plant materials not in containers shall be balled and burlapped and dug with a firm natural ball of earth. Balls shall be firmly wrapped with burlap or similar biodegradable materials and bound with twine, cord or wire mesh. The minimum ball sizes will be in accordance with "Grades & Standards for Nursery Plants". No plant shall be accepted if the root ball has been cracked or broken. All containers and root balls shall be kept moist at all times. All plants which cannot be planted immediately on delivery shall be kept moist and protected from drying winds and sun.
- H. Container Grown Plants: Plants grown in containers will be accepted as "B&B", providing that all other specified requirements are met. Container grown plants shall meet plant sizes as specified on the plant list on the Drawings, and shall not be governed by container sizes. Minimum root balls of container grown material shall be no more than 25% less proportionately than that stated in latest edition of Florida "Grades & Standards" for nursery plants. Plants shall have been grown in the container for a max. of 2 years prior to installation and shall exhibit a fully developed root system throughout when removed from container. There shall be no girdling or circling roots exceeding 50% of the pot circumference.
- I. Substitution: Plant substitution by the Contractor will be considered by Landscape Architect only upon submission of proof that the plant is not obtainable in the type and size specified. Should the specified plant be not be available, the Landscape Architect shall determine the nearest equivalent in obtainable size and variety. The unit price of the substitute item shall not exceed the bid item replaced, without owner approval.

- 2.3 PLANTING SOIL: Planting soil shall be free draining, sandy loam and shall contain a 5% minimum and a 15% maximum amount of decomposed organic matter. Planting soil shall be free of clay, stones, plants, roots, and other foreign materials which might be a hindrance to planting operations or be detrimental to good plant growth. It shall have a pH between 6.0 and 7.0. Soil shall be delivered in a loose friable condition and applied in accordance with the planting specifications.
- A. Topsoil: Horticultural peat composed of not less than 60% decomposed organic matter by weight, on an oven dried basis. Peat shall be delivered to the site in a workable condition free from lumps.

2.5 WATER:

- A. Clean Water for planting will be available at the site and shall be provided by the Owner unless special provision is determined in the Contract Documents.
- B. Contractor shall determine the source and suitability of the Owner's water. In the event the water source is not suitable, the Owner shall be given written notice of such at least two weeks prior to the commencement of Work.
- 2.6 SOIL TESTING:
- A. Landscape Contractor shall provide testing of existing soils on Site for all soil types, including imported soils, in the planting area. No less than 2 representative samples shall be submitted to and tested by an independent professional testing lab for analysis and fertility recommendations.
- B. Soil Testing Lab - Call for info, testing services, fees and Import permit. Micro-Macro International P 706-548-4557 F 706-548-4891 Web: www.mmlabs.com 183 Paradise Blvd, Suite 10B, Athens, Georgia, 30607
- 2.7 COMMERCIAL FERTILIZER AND PLANTING AMENDMENTS:
- A. Fertilizer and fertilization rates for the project shall be provided and applied based on the results of the soils test. Follow all Manufacturer's Label Rates and application recommendations.
- B. Commercial fertilizer shall be slow-release organic formulation containing nitrogen, phosphorus and potassium, must not exceed an analysis of 6-6-6. Nitrogen shall be not less than 50% water insoluble, inorganic nitrogen and shall not be derived from the sodium form of nitrate. Iron shall be in the chelated form, not be less than 2% and magnesium shall not be less than 2%. Fertilizers shall be delivered to the site unopened in original containers, each bearing the manufacturer's ingredients and guaranteed analysis. Submit a copy of the Manufacturer's guaranteed analysis and proof of delivery to the Landscape Architect. Any fertilizer that is unopened and undamaged is unacceptable.
- C. Microbial Additives: Mycorrhizal and microbial additives shall provided as specified in the Schedule of Soil amendments.Contractractor shall submit a copy of the manufacturer's label/ product use instructions that include: all ingredients, guaranteed analysis and application rates. All supplements shall be supplied in fresh, unopened packaging prior to product expiration. Product that becomes caked or damaged is unacceptable and shall not be used.

2.8 MISCELLANEOUS LANDSCAPE MATERIALS:

- A. Mulch: Shredded hardwood mulch -grade "A" -venfy color. Mulch shall not contain sticks larger than 1 inch (25.4 mm) in diameter, branches, stones or other foreign material that will prevent its even application.
- Alternate Mulches: Pine Bark Nuggets - Jumbo size, Pine Straw
- B. Gravel Mulch: Provide samples of all gravels to Landscape Architect for approval prior to ordering. Gravel shall be used only where specifically indicated on the plans of the size and type shown. Unless otherwise specified it shall be water-worn, hard, durable gravel, washed free of loam, sand, clay and other foreign substances. It shall be a minimum of 2" (44.2 mm) deep and shall be contained with gravel stops. It shall be a maximum of 1-1/2" (38.1 mm), a minimum of 3/4" (19 mm) and of a readily-available natural gravel color range.
- C. Braces, Battens and Stakes-Provide braces, battens, stakes and deadman of sound new pressure-treated lumber, free of knot holes and other defects. Braces shall be pressure-treated 2x lumber (4x lumber where appropriate) and shall be secured to battens and stakes with a min of (2) -1GD, bd head galv. forming nails. Battens shall be 2x4 pressure treated lumber and padded with burlap. Battens shall be secured to tree trunks with 3/4" Stainless steel or galvanized banding. Stakes shall be pressure-treated 2x lumber and shall be driven to within 2" of the surrounding grade. All exposed ground-stakes shall be painted with a high-visibility, contrasting, fluorescent paint until substantial completion. Braces and stakes shall be repainted a dark walnut brown stain unless otherwise noted. Stakes and braces shall be placed within half beads and oriented away from walking areas.
- D. Guys and Anchors: Provide one of the following: 1) 1/2" galv guys shall be two- strand, twisted, pliable galvanized iron wire not lighter than 12 gauge. Provide new hose cut to required lengths to protect tree trunks from damage by wires. Hose shall be not less than 1/2" (12.7 mm) dia.; 2) Woven Polyethylene Webbing -shall be min 2" wide. Trunks and stems shall be wrapped at least twice and secured with adjustable knots. Stakes per Sec C. above.
- E. Soil Mix for Annual or seasonal color beds: 2 parts top soil, 1 part fine pine bark mulch (1/2") (12.7 mm) pieces), 1 part coarse sand and 50 pounds (1,866g) of composted cow manure per cubic yard (.76455 cubic meters). Mix in Osmocote fertilizer and micro-organisms at label rates, see 2.7C.
- F. Planter Mix: Provide a loose, friable blend consisting of: 5 parts coarse sand, 2 parts peat humus or bagged topsoil and 3 parts pinebark; Mix in Osmocote fertilizer and microorganisms at label rates, see 2.7C.

3.0 EXECUTION

3.1 PREPARATION, SITE WORK AND COORDINATION:

- A. Grading: Contractor shall inspect the site to verify that finish grades (accurate within 2" (51 mm), have been established in accordance with Civil Engineer's Drainage Plan and the Landscape Architect's shaping and grading Plan or other job requirements prior to beginning any planting operations. Coordinate with Landscape Architect and General Contractor for release of areas before planting operations begin.
- B. Rough Grading and Shaping - Rough grading and bulk filling of site shall be the general responsibility of the General Contractor unless otherwise noted. Rough grade shall include placement and distribution of bulk fill material sufficient to generally be within -4" of final grade for landscape and within -2" of final grade for sod areas. Rough grades shall conform with the general intent of the drainage and grading plans. Rough grades may be field adjusted to allow for fill as generated by planting activities.
- C. Finish Grading - Finish and final grading shall be reviewed, approved and released by Landscape Architect or authorized Project Manager. Landscape Contractor shall notify LA Project Manager, in writing, before planting work in a given area is expected to commence. Finish Grades are the responsibility of the Landscape Contractor -including box blading and leveling of open sod areas.
- Finish grades of all planting areas shall be at 2" below pavement, after planting unless otherwise noted. Finish grades shall include any top soil and soil amendments as specified. If at any time the sub-grades are determined to be inadequate for proper design, the Project Manager should be given notification in writing.
- D. Top soils -The supply, placement and grading of Top soils shall be the responsibility of the Landscape Contractor unless other determined in the Construction Documents.
- E. Irrigation-The Contractor shall coordinate with the Irrigation installer. Irrigation system shall be installed according to Irrigation Plans and Specifications with any necessary field adjustments to complement the Landscaping Plans. Spray zones for sod and planted areas as described shall have 105% head to head coverage, matched precipitation rates and uniform water distribution with equipment as outlined. Drip emitters shall be installed per schedule. Drip and spray irrigation shall be fully operational and accepted before any mulch, stone, short ground covers or sod are installed. Irrigation zones shall be operating and accepted by Landscape Architect and/or irrigation designer before areas will be released for finish planting and/ or mulching as noted above. In the event of conflicts with landscaping and irrigation system, emitters, locations of trees, palms, large shrubs and specimens shall prevail. Pipes and emitters shall be relocated/adjusted to eliminate conflict and allow for the proper function of equipment.
- F. Landscape Lighting - The Landscape Contractor shall closely coordinate with the Lighting installer. Outdoor and site lighting system shall be installed according to the Lighting Plans and Specifications with any necessary field adjustments to complement the Landscaping Plans. Landscape lighting conduit shall be coordinated and installed in conjunction with irrigation trenching where ever suitable. Lighting conduit shall be installed and/or adjust AFTER major trees and palms are installed and before shrubs/ground covers are installed. In-ground fixtures and in-ground lighting equipment must be installed before sod, stone mulch and landscape mulch are installed. Lighting stub-ups/placements shall be reviewed approved and released by Landscape Architect before mulch,stone, ground covers or sod are installed.
- G. Mulch, Edging and Stone Mulch-Before mulch of any kind is installed, Finish Grading, Operational Irrigation, Lighting conduit, in-ground fixtures and metal edging shall be in place and accepted and released by either Landscape Architect or General Contractor.
- H. Sod - Before sod of any kind will be installed, Finish Grading, Operational Irrigation, Lighting conduit, in-ground fixtures, metal edging and mulch shall be in place and accepted and accepted by Landscape Architect. As noted above, landscape contractor is responsible for all fine grading subject to review and approval by the Landscape Architect.
- I. Removal of Rubbish: Any objectionable materials, such as stone, construction debris be encountered during planting operations,they shall be promptly removed from the site by the landscape installer.

- 3.2 PROTECTION OF PLANTS:
- A. Root Protection: All field grown trees, palms and plants shall be hand dug with sharp shovels or approved tree-spade. Backhoe-dug trees shall not be accepted. Roots shall be cleanly cut with sharp instruments. Balled and burlapped plants: plants designated "B&B" shall be dug with firm, moist earth of sufficient diameter and depth to encompass the fibrous and feeding root system necessary for plant health. Roots shall be firmly wrapped with burlap or similar materials and bound with twine,cord,or wire mesh. All collected plants shall be "B&B".Trees, palms and plants shall not be dug during periods of excessive heat or drought unless supplemental water is applied for at least 5-7 days in advance.
- B. Handling -contained plants shall be handled by their container w/ proper support given to all parts of plant to prevent damage.Trees and palms shall only be handled w/ padded slings rated for 10x the weight of carried load.Trunks shall be wrapped min.2X prior to cinch loop.No chain,rope or unpadded webbing shall be used to handle trees and palms.
- C. Protection During Transporting: All plant material shall be protected from possible injury or breakage of branches, limbs, stems, trunks, and leaves by using proper wrapping and sleeves to secure and protect roots, stems and foliage of plant materials during shipment. All plants transported by open trucks or sea-containers shall be adequately covered to prevent windburn, drying or damage to plants.
- D. Protection After Delivery: Plants which cannot be planted immediately on delivery to the site shall be kept moist at all times and provided protection from the drying of wind and sun. All plants shall be kept moist as necessary until planted. Storage period shall not exceed 72 hours. In plants cannot be installed within 48 hours, they shall be "heeled-in" earth trench rows and maintained in healthy, moist condition until final installation.
- E. Protection of Palms: A minimum of 1 inch of fronds shall be removed from the crown of palm trees to facilitate moving/handling. Remaining fronds shall be tied and braced if required.
- F. Protection During Planting: Trees moved by winch or crane shall be thoroughly protected from chain marks, girdling or bark slippage by means of burlap, padding, wood battens or other approved methods.
- G. Plants that show symptoms of bark compression, girdling or bark slippage or other damage are unacceptable.
- H. Special Treatment and Handling: Sabal Palms (Cabbage Palms) shall be "hurricane cut" in the field prior to transport. Clear trunk shall be as specified after the minimum number of fronds have been removed. Sabal Palms shall be taken from moist "black" growing areas. All chain marks on Sabal Palm trunks shall be removed. Collected or Field Dug Specimen Palms - All field dug palms, (except-Adonidia,Cocos,Phoenix,Washingtonia,Ptychosperma,Hypophorbe sp.) palms shall be root pruned for 2 months in advance of being lifted and moved. All palms shall be watered for 1 week prior to digging in the field. Heads shall have the lower 50% of fronds removed or as otherwise determined by Supplier. Heads shall be securely tied and secured before transporting. Heads shall remain tied-up until new root growth is visible or as otherwise determined by Supplier. All Palms shall have heads tied and braced during shipping & handling. Canary Date palms shall have heads securely stabilized with 4x4 bud splits

3.3 PLANTING OPERATIONS:

- A. Layout:The location for plants and outlines of areas to be planted are indicated on the Drawings. All plant locations shall be laid out,painted/flagged in field by the Contractor, to the satisfaction of the Landscape Architect before planting operations commence.In general,all trees,palms and accent plants shall be laid out, planted and approved by the Landscape Architect prior to the layout of shrubs/ground covers.Notify Landscape Architect and Owner for directions if site conditions requires the addition of soil over existing roots or where construction or utilities below ground or overhead are encountered, or where changes have been made to the construction. DO NOT PROCEED - Any necessary adjustments will be directed by the Landscape Architect.
- B. Clearances: Shrub/hedge material shall be planted a min. of 30" (0.75 m) away from wall or other obstructions (including parking stops). Groundcover (1 gal or less) material (except sod) shall be planted 16" (10.41 m) away from pavement or edging unless otherwise noted. Vines shall be attached with copper wire to brass screws in lead anchors to walls. Make minor adjustments as may be required.
- C. All planting holes shall have straight,vertical sides and flat horizontal bottoms.The diameter of a hole shall not be less than twice the diameter of the root ball or 24 inches (609.6 mm) greater than the root ball,whichever is smaller.The depth of a hole shall not be deeper than the root ball. The bottom of the hole shall be compacted and leveled.
- D. Contractor shall confirm that all planting holes are free draining and percolate water.If hardpan,compacted soils,clay or rock are encountered,immediately notify Landscape Architect to determine remedial measures.
- E. Backfill and Soil Amendments-Backfill shall be clean,fine,granular loamy soil unless otherwise noted. All palms shall be backfilled w/ clean, washed, salt-free sand. Clumpy or rocky soils shall be screened or replaced w/ appropriate material prior to backfilling. Refer to soil report recommendation for fertilizer type/rates. Additionally, Mycorrhizae and soil bacteria shall be added at the manufacturer's recommended rates (see 2.7c). The following minimum rates of soil mix apply: 1/2 cubic yard for 50 plants per 1000 sq ft.
- F. All plants shall be handled and installed in accordance w/ the Construction Documents and best appropriate horticultural practice. Trees and shrubs, except as otherwise specified, shall be set in the proper size of planting pit so that the top surface of the Root Collar/root ball will be 1"-2" above the final grade. Verify adequate percolation of the planting hole. Set plants straight and plumb unless otherwise noted. Select trees, palms and accents shall be leaned, oriented or faced as determined by Landscape Architect or as shown on the drawings.
- G. B&B plants are set with bottom 1/3 of planting pit backfilled w/ existing site soil. Remove burlap,rope,wires,etc. from any trunk and top surface of balls. Do not remove burlap from underneath.All remaining wrapping material shall be biodegradable. All plants shall be encased in the trunk. Complete backfilling w/ native soil (or specified soil mix) and water thoroughly to remove voids. After planting has been completed,form a trough around each plant extending to the limits of the pit. Some wire wrapping and bundling may remain to maintain the integrity of the root ball. Review removal requirements in advance with the Landscape Architect.
- H. Container Grown Plants: Shall, when delivered, have sufficient root growth to hold earth intact when removed from container and shall not be root bound. Plant pits for container materials shall be formed flat on the bottom to avoid air pockets at the bottom of root balls. Containers shall be removed carefully to prevent damage to plant or root system.

3.0 EXECUTION

1. Remediation of Root defects - The Contractor shall inspect all plant material for root defects including but not limited to: root-bound containers; circling roots; girdling roots; sub grade, embedded root collars; adventitious roots; etc. All Root Collars shall be exposed and visible at the time of planting. Plants with two (2) or more girdling roots; plants from root-bound containers; or plants with circling roots greater than 75% of the pot circumference shall be rejected and replaced at the Contractor's expense. Plants with minor root defects shall be trimmed with clean, sanitized, sharp tools according to proper horticultural practice prior to planting. Plants shall be well watered prior to, and after, root trimming procedures. Plants that die as a result of root pruning are considered excessively defective and shall be replaced at Contractor's expense.
- External Circling Roots - shear off outer 1"-2" of rootball circumference
- Internal Circling Roots - radial cuts to interrupt circle, remove 2" min. section of root.
- Girdling Roots-cut and remove the 2" min section of the girdling root at the surface.
- Root Knots - trim or remove.For more information- refer to University of Florida- IFAS Website <http://hort.ufl.edu/woody/index.html>
- For Root management -Refer to <http://hort.ufl.edu/woody/roots.html>
- J. Setting Trees and Shrubs: Unless otherwise specified, all trees and shrubs shall be planted in pits, centered to such depth that the finished grade level of the Root Collar, or better settlement. That is, the same as, or slightly above, that at which the plant was originally grown. They shall be planted upright and faced to give the best appearance or relationship to adjacent structures. The Contractor shall be responsible to raise and re-set all plant materials where root collars are found below finish grade at their own expense.
- Along slopes, a soil terrace shall be formed so that the top of the Root Collar is level with existing grade on the up-slope side. No burlap shall be pulled out from under the balls. Tree boxes, platforms, wire, lifting loops and surplus binding from top and sides of the balls, shall be removed. Some wire or binding may remain if tight and necessary for rootball integrity. Any broken and frayed roots shall be cut off cleanly. Backfill soil shall be placed and tamped thoroughly around trunks and roots. No girdling roots or top or bottom of root balls will be permitted. After the backfill settles, additional soil shall be filled in to the level of the finished grade allowing for 2" (44.1 mm) of mulch. Form a shallow saucer around each plant by digging a trough of soil along the edge of the plant pit. This trough shall be 3"-4" (75 mm) deep. Specimen trees and Palms shall be equipped with supplemental irrigation (bubblers).
- K. Setting Palms: All palms shall be planted in sand thoroughly washed in during planting operations and with a shallow saucer depression left at the soil line for future watering.
- L. Backfilling: When the plant pit has been excavated as specified above and the plant has been set, the pit shall be backfilled with clean soil mix. All backfill shall be watered thoroughly to settle and consolidate soil and eliminate voids. Provide a shallow trough around the outside of the rootball for water retention. Tops of all rootballs shall be left exposed and free of soil backfill materials. Do not distribute any excess soil in any existing planted bed.
- M. Pruning: Remove dead/broken branches from all plant material. Thin out internal branching and prune to retain typ. growth habit of individual species with as much height and spread as is practicable. Make all pruning cuts with a sharp instrument next to branch collar to ensure elimination of stubs.Headback' or 'Hat Rack' cuts, right angle to line of growth, will not be permitted.
- N. Guying and Staking: Guy and stake all trees, including palms, immediately after planting. Trees less than 1/2" (38.1 mm) in caliper shall be staked with vertical guy wires or metal stakes along the trunk. Stake shall be driven through the root ball and embed 12" min. into sub-grade. Attach tree trunk to the stake with 3/4" wide elastic pruning tape. Double wrap trunk to avoid chaffing. Tie firmly, but not tightly to the stake. Stake shall be cut off at least 1/2" below the top of the plant. Trees 1 1/2" (38.1 mm) in caliper and greater but less than 12" OA shall be guyed in 3 directions with double strands of No.12 galvanized wire (or rated woven polyethylene webbing) attached to approved stakes or anchors driven flush with grade. When securing wires to trees, cover all wires which may come in contact with any part of tree with new rubber hose. Place guys and braces not less than 1/3 of the height of tree above finished grade and above substantial mulch (mulch (25.4 mm) in diameter or more). Ground Stakes shall be clearly marked with high contrast fluorescent paint. Trees over 12' OA shall be braced with new lumber per staking detail. Provide stained where noted. Ground Stakes shall be clearly marked with high contrast fluorescent paint.
- O. Staking and Bracing: When staking palms and broadleaf trees, no nails or fasteners shall directly penetrate the trunks. Wood battens: 12" -16" min(304-406 mm) min. length; separated from trunk by burlap; attached to the trunk of the trees with galvanized or stainless steel metal banding. Stakes and braces shall be clearly marked and can only be nailed to the wooden battens. Alternate methods of guying or staking may be employed with the prior approval by the Landscape Architect. Ground Stakes shall be clearly marked with high contrast fluorescent paint.
- F. Mulching: All trees and shrub beds shall be mulched immediately after acceptance of the planting bed by the Landscape Architect. Mulch shall be applied to a 3" (76.2 mm) depth, with a mulch as specified. Prevent wind displacement of mulch by thoroughly watering down. Do not apply any mulch against stems and trunks of plants.
- Q. Annual/seasonal color beds: Remove 8" to 10" (254 mm) of soil and replace with planting soil mixture consisting of Annual Planting Soil Mix per Section 2.8.E. Install annuals in fresh mix.
- R. Planters:Includes free-standing pots and built-in architectural planters. Verify waterproofing and drainage to suitable outfall. Place filtration/ separation fabric over 4" drain gravel in the bottom of the planter. Place planting soil per Section 2.8.F. Place soil against plant material in lightly compacted layers to an elevation 2 inches (38.1 mm) below top of planters allowing for natural settlement. Recommend 6"-8" min depth of soil below rootball.
- S. Disposal of Excess Excavated Soil: Excess soil, raked debris and rocks shall be removed and disposed by the Contractor to a suitable and legal disposal location off-site, at no additional expense to the Owner.
- T. Relocation of Existing Material: Landscape contractor shall root prune trees which are to be relocated in accordance with approved horticultural practices. The relocated plant shall have foliage reduced and be provided with supplemental irrigation to the remaining leaf surface. Coordinate with Landscape Architect for relocation requirements.

3.4 SOD

- A. Sod shall be as spec'd on Dwgs. Sodded area shall be all areas not otherwise noted and include adjacent public yards beyond the property line to edge of pavement and/or edge of water.

- B. Fine Grading & Drainage: The Contractor shall verify drainage surface drainage flows and shaping in accordance with the Civil Drawings and the Grading plans. Contractor shall be responsible for providing and maintaining positive drainage flows away from all building and pavements to the appropriate discharge or collection points.

- C. Sod Quality: Any quantities shown on the Drawings or given in the Plant List are intended for the convenience and as a guide for the bidder and does not relieve the bidder of his responsibility to do a comprehensive quantity take off (measurement) from the Drawings or in the field. Contractor shall be responsible for sodding all areas as noted on drawings. Contractor shall verify all final sod quantities in the field prior to ordering and delivery of the sod. The Contractor shall provide adequate coverage.

- F. Sod Quality: Sod shall be graded #1 or better. Sod shall be loam grown w/ a firm, full texture and good root development. Sod shall be thick, healthy and free from defects and debris including but not limited to dead thatch, insects, fungus,diseases and contamination by weeds,other grass varieties or objectionable plant material.

- G. Sod pieces shall be 16' x 24" min. size in unbroken, cohesive sections or furnished in an otherwise approved manner.

- H. Before being laid and lifted,sod shall have been regularly watered and mown at least 3 times w/ a lawn mower, w/ final mowing not more than 7 days before sod is out.

- I. Sod shall be laid and installed and installed in green, healthy, viable condition. Yellow, Brown or excessively wilted sod shall not be accepted.

- J. Sod shall be laid w/oddly abutting joints w/ a tamped or rolled, even surface.The Contractor shall bring the sod edge in a neat, clean manner to edge of all paving and shrub areas. Clear circular areas shall be provided around all free-standing trees in open sodded areas.If, in the opinion of the Landscape Architect, top-dressing is necessary after rolling, clean sand will be evenly applied over entire surface and thoroughly washed in w/o addtl charge.

- K. Sod along slopes shall be pegged to hold sod in place along slopes/banks. A wood peg acceptable to the Landscape Architect shall be used at no additl cost to Owner.

3.5 CLEANUP

- A. Sweep and wash all walls and paved surfaces.

- B. Remove planting debris from project site daily. Ensure all plant material is free of damaged branches, flagging tape and other temporary materials.

- C. Lawn areas damaged by planting operations shall be resodded to original condition.

- D. Walks, drainage pipes or other structures damaged by this Contractor shall be repaired to original condition.

- E. Remove soil ridges around watering basins prior to end of maintenance period.

- 3.6 MAINTENANCE DURING CONTRACT PERIOD: The Contractor's maintenance shall include watering, pruning, spraying, weeding, mowing, insect treatment, disease treatment, micro organisms applications and other necessary maintenance operations to create a healthy, vigorous landscape.
- B. The Contractor assumes responsibility for all maintenance during the construction period, beginning immediately after each item is planted and to continue until final inspection and acceptance. Areas completed under "Early Acceptance" of the work or approved phases of the work shall be maintained for an additl 90 days or until final acceptance of work,which ever occurs first.
- C. The Contractor shall replace unhealthy, damaged or dead plants promptly. Contractor shall be responsible for costs to provide access to unacceptable plants identified during the Contract period.
- D. The Contractor shall inspect and maintain plants at least once a week and perform maintenance promptly. Keep planting saucers and beds free of weeds, grass, and other undesirable vegetation growth.
