F. Narrative description of entire renovation project being undertaken, including sources of project financing and anticipated benefit to property and CRA District

This renovation project will encourage neighborhood cohesiveness, preserve and enhance property values, increase the desirability of commercial and residential real estate, and encourage patients and prospective patients to patronize our services. This is a significant because it helps those in our community who are suffering in pain to find a drug-free non-surgical approach to living a healthier and happier life.

Although there will not be structural changes made to the property in any way, there will be extensive steps taken to beautify the current aesthetic. Our concern is only focusing on internal non-weight bearing modifications to improve ADA compliance and beautification.

The driveway and parking lot will be repaved and painted to be more visually appealing and create a smoother ride when driving. Both the interior and exterior walls will be painted with vibrant, passionate, and warm colors to induce vitality and stimulate energy. The entrance way to the treatment room will be designed utilizing feng shui techniques to promote harmonization of patients with their surrounding environment. Energy efficient air conditioning units will be installed as well as energy efficient impact resistant windows to lessen the monthly electric bill as well as our carbon footprint. The signage will be updated to be easily seen by people in the area. Surveillance cameras and lights will be installed to ensure the safety of patients, nearby residents, and their property. We will have a bicycle rack mounted to promote physical activity and exercise to and from work or home. All electrical and plumbing renovations will be current with city codes
