

General Notes

1. All utility boxes and structures, air conditioners, etc., not currently known or shown on the plan, shall be screened with Coccolup plants on all sides. Size of plants shall be the same as specified in the Plant List.
2. Contractor to include drainage testing for all trees and palms in bid. If drainage is inadequate and the soil specification in item #8 of the landscape specifications is not appropriate for site conditions, the soil mixture shall be revised for this site's conditions. The Contractor shall notify the Owner and Landscape Architect of the poor drainage conditions in writing and written direction will be provided to the contractor of appropriate soil mixture specification to be used.
3. All prohibited, exotic and invasive species shall be removed from the entire site area of site prior to issuance of certificate of occupancy.
4. All required landscape improvements must be inspected and approved by the City of Delray Beach prior to the issuance of a Certificate of Occupancy.
5. This plan has been designed to meet with the tree planting requirements contained within the FPL document entitled 'Plant the Right Tree in the Right Place' on new (proposed) plantings.
6. Planting adjacent to fire hydrants shall have a minimum clear radius of 7.5' front and sides and 4' in the rear as required by the NFPA Uniform Fire Code Florida Edition 18.3.4.1 Hydrants.
7. No plant substitutions can be made without Owner's and the City of Delray Beach's approval.
8. Trees and palms shall have limbs or foliage trimmed in such a manner that no limbs or foliage extend into the sight visibility triangle between three (3) feet and six (6) feet measured above the grade level.
9. Existing native soil within all landscape islands, interior landscape strips and perimeter landscape strips, adjacent to vehicular use areas, shall be excavated down to a depth of thirty (30) inches below existing grade, except for a 12" buffer from the inside of curb or pavement. A suitable planting soil mixture of fifty/fifty (50/50), sixty/fifty (60/40) (sand/topsoil) or as otherwise indicated by the Registered Landscape Architect (see specifications), shall either be backfilled in place of the native soil or efficiently mixed with the native soil to create an optimum environment for successful root development. If native soil is to be mixed, it shall first be screened to remove rocks and debris larger than one-half (1/2) inch in diameter prior to mixing. All properties under this section shall be required to have an open landscape bed inspection prior to backfilling to insure the thirty (30) inch depth has been met. See detail below.
10. Refer to the specifications for planting soil requirements.
11. Any trees or shrubs placed within water, sewer or drainage easements shall conform to the City of Delray Beach Standard Details LD.1.1 & LD.1.2. See details on detail sheet.

Irrigation System

The irrigation source shall be reclaimed water if available; if not it will either be potable water or a well. All planting areas shall be irrigated to provide 100% coverage and provide adequate irrigation of landscape areas for the first full growing season and continue thereafter only as necessary to maintain required vegetation in good and healthy condition. The irrigation system shall be continuously maintained in working order. An automatic rain sensor shall be placed on-site as part of the required irrigation system. Shop drawings shall be submitted by the irrigation contractor for approval prior to installation.
